 Jakarta, Indonesia

Professional Summary

Passionate design engineer and product designer with over 3 years of expertise in creating impactful user experiences and leading design teams. Skilled in developing user-centric products and implementing software solutions as a proficient software engineer. Proven track record of designing solutions benefiting millions of commuters and engineering systems that enhance internal management efficiency.

Skills

 Figma

 Maze

 Framer

 Webflow

 React

 Next.js

 Astro

 Typescript

 Redux

 Jotai

 Tailwind

 Shadcn UI

 Radix UI

 GSAP

 Framer Motion

 Flask

 GraphQL

 Supabase

 PostgreSQL

 Vercel

 GCP

 Docker

 Illustrator

 Photoshop

Education

University of Indonesia

Depok, Indonesia

Bachelor of Computer Science

- Information Systems major
- Organizations: BEM Fasilkom UI (Multimedia Designer), PERAK Fasilkom UI (Graphic Designer), Dies Natalis Fasilkom UI (Graphic Designer), COMPFEST (UI/UX Designer, UI/UX Design Manager), RISTEK (Vice Director of Digital Product Design)

Experience

Meeting.ai

UX Engineer

10/2024 - present

- Conducted UX research and competitor analysis to support globalization efforts, tailoring designs for Western clients and new markets.
- Redesigned and optimized the landing page to accommodate thousands of new users, enhancing usability and accessibility across diverse markets.
- Developed the landing page with advanced, thoughtful animations to create an engaging user experience, improving user retention and engagement.

GlobalDeel

Software Engineer

06/2024 - 09/2024

- Developed and maintained a Flask backend system to automate the creation of hundreds of new tenants, improving onboarding efficiency.
- Managed and optimized a PostgreSQL database for storing and retrieving tenant data, ensuring secure and efficient data handling.
- Implemented GraphQL queries to enhance data communication between services, optimizing performance and scalability.
- Integrated AI recommendation systems via third-party APIs to deliver relevant tenant articles, improving content personalization.
- Designed and developed responsive frontend components using Next.js, TailwindCSS, TypeScript, and Redux, significantly enhancing client engagement and acquisition.

PT Transportasi Jakarta (TransJakarta)

Product Designer

08/2023 - 04/2024

- Conducted extensive user research with a diverse range of commuters, both current and non-users of Transjakarta, to identify pain points, user behaviors, and competitive landscape, contributing to informed decision-making.
- Developed a comprehensive atomic design system in Figma, utilizing components and variants to create a modular and composable design, ensuring consistency and efficiency in the design process.
- Crafted and built a fully interactive, high-fidelity mobile prototype, utilizing the atomic design system, to conduct usability testing. This process helped assess usability, performance, and validate design decisions, ensuring a user-centric approach in the final product.

State Bank of Engineer (BNI) - International Division Custody System

Frontend Engineer

08/2023 - 01/2024

- Spearheaded the development and upkeep of an advanced internal system managing 100+ BNI international customers, utilizing cutting-edge web technologies including Next.js 14, TailwindCSS, and Typescript.
- Engineered a comprehensive color token system through DaisyUI, introducing 30+ new colors compatible with TailwindCSS utility classes across three distinct color themes for enhanced user interface.
- Implemented proper server and client side rendering practices, overseeing tens of reusable React components to ensure seamless functionality and user experience.
- Implemented coding best practices with tools like Prettier, Husky, and SonarLint, resulting in a SonarCloud score of A for reliability, security, and maintainability.

Organizations

RISTEK Fasilkom UI

Vice Director of Product Design

01/2023 - 01/2024

- Nominated as the Best Board of Director for exemplary dedication in enhancing teamwork and elevating the overall design capabilities of the product design team.
- Directed and actively participated in over 10 design projects catering to clients from Indonesia and Australia, overseeing the entire project lifecycle and ensuring client satisfaction.
- Orchestrated engaging and informative workshops on product design, delivering lectures to all members of RISTEK and fostering an interactive learning environment.
- Revamped the RISTEK recruitment page, enhancing user experience with a new form layout and engaging 3D hero section, resulting in a 25% increase in new registrations.

COMPFEST

Principal UI/UX Designer

12/2021 - 11/2022

- Designed and developed an extensive design system with over 100+ components and styles complete with states and interactions that was used by over 6000 people on Figma.
- Led a team of designers in collaborating with software engineers to research, design, and test more than 20 web pages for compfest.id, resulting in successful deployment to real users.
- Curated and presented engaging internal workshops for members, providing comprehensive onboarding and introducing essential design principles to improve collaboration and streamline project workflows.
- Collaborated with project owners and developers to ensure adherence to required specifications and measure feasibility, ensuring high-quality product delivery.

Projects

BangSoal

Co-Founder & Head of Product

08/2023 - present

- Co-founded a pioneering startup focusing on aiding high school students in excelling at university placement exams through the innovative integration of gamification and AI which can be viewed [here](#).
- Served simultaneously as the lead product designer and frontend engineer, overseeing the creation of the brand design, logo, and color schemes to establish a cohesive and engaging identity.
- Conducted comprehensive user research and shaped the user experience by leveraging insights from user interviews, resulting in the design of responsive feature pages, including the landing page and interactive practice interfaces.
- Meticulously designed and planned the framework and libraries, choosing React with Next.js and Tailwind for styling, and incorporating composable UI libraries such as RadixUI with ShadcnUI.
- Enhanced user engagement through the integration of motion design using Framer Motion, ensuring a visually dynamic and responsive user interface.

Silicon Design System

Design System Developer

10/2021 - 11/2022

- Published and promoted the design system on the Figma Community platform, achieving over 6000 downloads and implementations by designers across the globe which can be viewed [here](#).
- Utilized Figma's latest features, including Variants, Auto Layout, Interactive Components, and more, to develop a cohesive and scalable design system for use by real users in COMPFEST whose case study can be read [here](#).
- Collaborated with developers to ensure compliance with frontend standards and create clear documentation for streamlined development processes.
- Successfully implemented the design system across 20+ design files, collaborating with multiple designers in COMPFEST to ensure consistency and enhance usability.
